

AN ORGANIC LIGHT EMITTING DEVICE AND METHOD FOR  
MAKING THE SAME

ABSTRACT OF THE DISCLOSURE

The present invention directed to an organic light emitting device and method for making the same. The method comprises the steps of: forming a first component comprising at least one first material on a first substrate; forming a second component comprising at least one second material on a second substrate, wherein at least one opening is formed through the second component; forming a third component; and laminating the first component, the second component and the third component together such that the second component is located between the first component and the third component, the at least one first material and the at least one second material form at least part of an organic electro-optic device located between the first substrate and the second substrate, the third component is bonded to the second component, and the third component is bonded to the first component through the at least one opening.
